

## Luscombe 8

To: All BAS-Serco employees and anyone you think may be interested

Frank Williams, Vice President & Chief Executive Officer

Date: 07 May 2010

Subject: Restoration of VR-BAK

Another hard weekend of sanding drilling took place  
More parts came out of the hanger and the jigsaw of pieces were gone though  
It soon became evident that some of the parts found did not fit our luscombe

However everything except the rudder was accounted for ( need to go and look in the hanger again )  
Although there is plenty of sanding and riveting to do we are seeking skills of fabricators to make up corroded brackets and teach budding student how to make up templates

The decision was made to reskin the wings were needed and foam fill them so that they become ridged again due to the corrosion on the main supports

Waiting conduit and then riveting back together

Look great but don't fit our plane

Hard at work

This coming weekend the fun continues starting at 2.00pm on Saturday

Volunteer teach or learn new skills

Up coming jobs range from sanding , panel beating , fibre glassing, etc and anyone can learn how

Please let me know if you will be coming this weekend  
Cheers Frank

Watch this space ...
